# **Doubling Down on Internet Safety!**

**Join the University of Arizona's iSchool  
in Sharing Materials in U. S. Libraries!**

**We are providing new support for librarians by highlighting the Family Online Safety Institute's materials on 'How to Be a Good Digital Parent'**

The Family Online Safety Institute has launched the 'How to Be a Good Digital Parent' program to teach parents and caregivers how to confidently navigate the web with their children.

The program provides users with the resources needed to plan and deliver the "How to Be a Good Digital Parent" program at community events including workshops conducted by local libraries. The program provides a toolkit containing a PowerPoint presentation, instructional video, copies of audience handouts, and presenter's guide. The presenter's guide is designed to help the presenter every step of the way – from the initial planning to the delivery of the presentation. It also contains an overview of the most popular apps kids are using and answers to the most frequently asked questions.

The program will help parents and other caregivers to:

- Understand the risks, harms and rewards of their children's online lives
- Learn about online protection strategies
- Confidently navigate the online world with their children

Librarians have been hosting instructional events around Internet safety for YEARS, and 'How to Be a Good Digital Parent' provides new, informative, easy to execute material librarians can share with constituents across the U.S. Parents and other caregivers will leave presentations with a greater confidence in their ability to manage digital life, and many good lessons for non-parents on such topics as clearing digital histories or managing privacy can be drawn from these materials as well.
